

UGENT SAILING

INFO FOR PARTNERS

WHO ARE WE?

We are a **student team** representing Ghent University at the international **Monaco Energy Boat Challenge**. By building an **autonomous, CO2-neutral ship**, we bring together people from diverse backgrounds to learn, innovate, and create a better tomorrow. We are young, curious, highly motivated, and determined to join the **AI Class** of the MEBC 2026.

THE BEGINNING: JANUARY 2025

GOALS AS OF JANUARY 2025:

FIRST PROTOTYPE IN 2025

Our goal was to develop a first working prototype by the end of the Fall semester.
This goal was reached as of September 2025. The prototype is still used as test platform for Team Autonomous, and as a part of the Bachelor Project for Computer Science.

OFFERING MASTERS THESIS IN 2026

DTheses will foster close collaboration between UGent, industry partners, and our team, paving the way for innovative advancements and practical applications.
In AY25-26, 4 thesis students are working on our future developments.

FIRST COMPETITION IN 2027

We aimed to participate in our first competition, the Monaco Energy Boat Challenge, in 2027, showcasing our most advanced boat and the innovative solutions developed through our collaboration with UGent and industry partners. *Because of the successful completion of our prototype, we decided to enter the competition in 2026, and were accepted as new participant.*

OUR FIRST YEAR

We look back on our first semester with pride and gratitude. What started as an ambitious idea quickly turned into a fast-moving project that exceeded our own expectations. We're amazed by how much has been accomplished in such a short time, and deeply thankful to everyone who helped us get here.

TEAM GROWTH

Our team expanded rapidly this semester, bringing together a diverse group of members, from second-year bachelor's students to master's students, PhD candidates, and recent graduates. All collaborating to build and learn alongside one another.

EXPANDED NETWORK

Thanks to the outstanding work of our social media team, our online presence grew significantly, and our name became widely recognised among students across our faculty.

ACADEMIC RELATIONS

We have established valuable connections with several departments, including the Ships and Marine Technology, Composites, Control and Automation, Electronics, and Electrical Power department, as well as with student societies such as Ceneka, PKarus, and UGent Racing. We sincerely thank them all for their support, and are looking forward to growing together.

PROTOTYPE

We are proud to announce that we built a fully functioning prototype! Want to see it up close? Follow us to stay updated on our upcoming events!

OUR CHALLENGES THIS YEAR

While we are proud of the progress made so far, we recognise that there is still much work to be done. The road ahead will bring new challenges, and to overcome them, we will need all the support and resources we can gather. Together, we can continue pushing boundaries and turn our vision into reality.

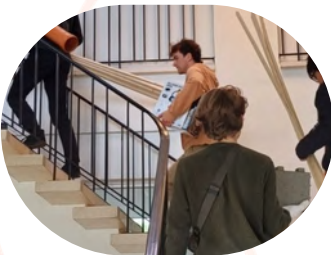

INNOVATION

Innovation is at the heart of our project. To explore new ideas, test concepts, and develop better solutions, we need a space and the support to experiment and grow. If you or your organisation can offer expertise, tools, or opportunities to help us innovate, we'd love to hear from you!

RECRUITMENT

We are still seeking new team members for to join our amazing group. If you're interested or know someone who might be, please get in touch! We are also eager to expand beyond FEA and welcome students from other faculties to bring fresh perspectives and skills to our project.

MATERIALS

Building a ship requires materials and equipment, and we're still on the lookout for these essentials. If you have any resources or equipment you can offer, please get in touch with us! Every contribution helps bring the project closer to completion.

KNOWLEDGE

Our goals for this year are BIG. We are ready for the challenge. Moving from a 2m wooden model to an autonomous, fully composite, competing ship won't be easy, but with some help, we believe we'll get there by May 2026.

OUR GOALS

As we look ahead, our plans are ambitious and our pace is accelerating. We are committed to growing bigger, moving faster, and improving every aspect of our project. The steps we're taking now will lay the foundation for the next level of success, and we're excited to push boundaries like never before.

FULL SCALE GEN1

The prototype is operational, and now we are ready for the next big step. This year, we aim to realise our GEN1 design with a fully composite hull. With this, we plan to participate in the A1-class of the Monaco Energy Boat Challenge in July 2026.

DESIGN GEN2

In the meantime, we will be designing the GEN2 ship, which is intended to compete in the Monaco 2027 Challenge at a competitive level.

HYBRID POWER

A part of our energy will go to find a way to fuel our ship in the most efficient, innovative, and sustainable way. A theoretic study will be done to look into the use of bio-fuel the power our CO2-neutral ship.

OUR BELOVED SIDE-QUESTS

Don't misunderstand us. Nothing will stop us from giving our all to reach the finish line in Monaco next summer, achieving results we can be proud of.

But at its core, this is what drives us: learning together, growing together, and building a better tomorrow.

We don't limit ourselves to our ship. This year, we create a living lab to monitor water quality in the campus lake, and participate in national and international events to expand our vision, knowledge, and network.

PRACTICAL INFORMATION

COST CALCULATION

Energy	3x inverter, 2x battery pack, 1x charger, control system	21.650
Elec	motor,	18.300
Autonomous	cameras, gps, display, computersystem	6.100
Design	office supplies	1.200
Construction	Composites	15.500
	Other	9.200
Organisational	events, sprints, marketing, merch	32.400
Total cost		104.350
Head partner	"0.10*total cost"	10.435
Collaborative partner	"0.044*total cost"	4.591

We have all the motivation, energy and will to learn a team could have, but sadly, that is not enough. By giving us resources or funding, you can be the missing factor.

Join us: let's learn together, let's build together, let's win together.

THANK YOU FOR YOU INTEREST
